

QCTrojan-Bench — VQC: benign circuit and tampered variants

Benign

10 qubits | depth = 25 | gates = 136

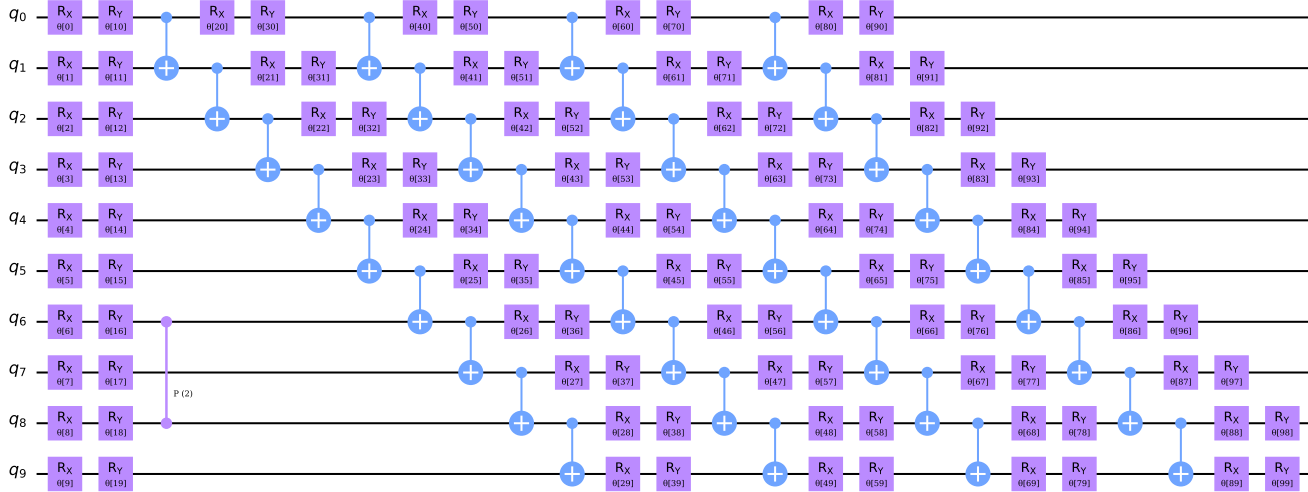

Static tampered

10 qubits | depth = 25 | gates = 139

CX-RZ(1.25)-CX on qubits [5, 4]

Triggered tampered

10 qubits | depth = 25 | gates = 137

*MCPhaseGate(2.00) controlled by qubit 6,
target qubit 8. Dormant when control is |0>.*
